

## SERVER INSTALLATION INSTRUCTIONS

---

1. Install Oracle 8i.

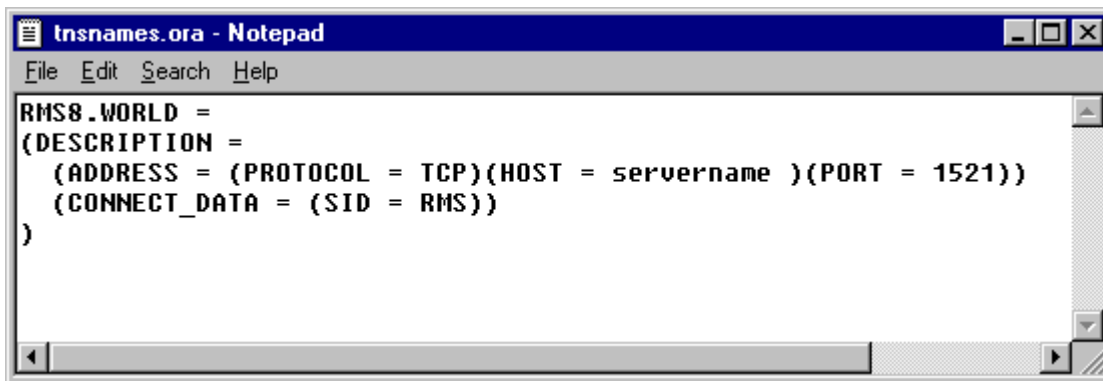

- Select the standard install.
- Do not allow the install to create a database.

2. Run RMSDBCcreator.

- This will ask some questions to generate scripts to create the database. It will then execute the scripts.
- At this point if you need to load an Oracle dump file execute the DropRMS.sql script and load your dump file.

3. Setup your tnsnames.ora file.

It should have an entry for your Oracle database similar to the following:

A screenshot of a Notepad window titled "tnsnames.ora - Notepad". The window has a menu bar with "File", "Edit", "Search", and "Help". The text inside the window is as follows:

```
RMS8.WORLD =  
(DESCRIPTION =  
  (ADDRESS = (PROTOCOL = TCP)(HOST = servername )(PORT = 1521))  
  (CONNECT_DATA = (SID = RMS))  
)
```

4. Download, extract, and run RMSSchema.exe.

- Select all the library updates.
- Check for errors in the log file.
