- Operation Hours: 24/7, excluding holidays

2 Change Requests

Parent CLIN Description Added in Parent/Child CLIN Setups

RMS 3 now displays the Parent CLIN description when adding a priced subCLIN to the CLINs module. RMS 2.38 had this functionality and now RMS 3.0 has the same.

This is in the Finances → Award CLINs module.

The screenshot displays the 'Award CLIN' interface. At the top, it says 'Award CLIN'. Below that, there's a section for 'Priced SubCLIN 0002AA'. The form includes several input fields and summary rows:

Description			
Unit of Measure	M7 - Micro Inch		
Parent CLIN 0002 Description			
Award Unit Price	¥ 0	Award Contract Amount	¥ 3,540,491,000
Award Quantity	0	Sum of All Award CLINs	¥ 3,540,491,000
Award Amount	¥ 00	Variance	¥ 00

At the bottom, there is a checkbox labeled 'CLIN pricing complete - ready to fund' which is currently unchecked.

Fix for RMS Certificate Issues at Login

RMS now follows other DoD websites and applications by asking users for their CAC card certificate on login. RMS will remember the certificate selected for the entire RMS login session. Previously, RMS would try to assume the certificate when users attempted to log into RMS with a CAC Card. This worked when there were just a few certificates being used.

Please note that it is normal for Windows to remember the session if logging out and in really quick, just like with some applications/websites. This change should also fix issues with not being able to sign documents in RMS for those who were affected by the CAC card certificate issues.

.XYZ Added as a File Extension for RMS Document Packages

This file extension type is used by several hydrographic survey data applications. This extension type will now be accepted by the RMS Document Package in contracts.

3 Bug Fixes

Application Pay Access Error

In rare occasions users were unable to access progress payments due to how their account name was setup. This has been fixed to allow access to progress payments.

Prevent QA Code from Being Seen on Unsent Submittal Items

The Contractor was able to see the QA code for a submittal item in the submittal register before the transmittal was completed on the Government's side. This has been fixed to prevent the QA code from showing until it is sent to the Contractor.

Removed Districts from Office Lookup Summary

In Summary Reports, when choosing sub offices, the districts, divisions, and other collections incorrectly appeared. Now, only the district the report exists in and the suboffices in that district appear in the list of offices in Summary Reports.

Fixed Issue with Duplicate Document IDs for Documents Going to PCF

Fixed an issue where PCF transfers weren't completing due to duplicate document_ids being sent. This has been fixed and will no longer prevent PCF transfers.

Fixed Issue with Final Payment Errors when Adding Signed ENG 93

In rare occasions users were getting application error messages when dropping in the signed ENG 93 for final payments. This has been fixed to prevent crashing on the final payment.
